

7-Tier Universal Currency Integration Guide

Connect Unity, Unreal Engine, Godot, Flutter, and Web games to the shared Google Cloud Firestore economy engine under project `webspider-studios-hub`.

Tier	Currency Name	Firestore Field	Starting Balance	Role & Gameplay Function
1	Spider Brass	webspider_brass_coins	100	Hints, undos, basic assists.
2	Spider Copper	webspider_copper_coins	200	Level completion rewards.
3	Spider Silver	webspider_silver_coins	50	Standard cosmetic store skins.
4	Spider Gold	webspider_gold_coins	10	Premium chests & tournaments.
5	Spider Diamond	webspider_diamond_coins	0	Multiplayer competitive bets.
6	Spider Jade	webspider_jade_coins	0	Seasonal events & boss quests.
7	Spider Obsidian	webspider_obsidian_coins	0	Mythic founder VIP privileges.

Multi-Engine Integration Guide (Unity, Godot, C++)

Atomic transactions can be executed either via native Google Firebase SDKs or the Cloud Firestore REST API.

Target Engine	Recommended Approach & Endpoint
Unity (C#)	Use Firebase Unity SDK: <code>FirebaseFirestore.DefaultInstance.RunTransactionAsync(...)</code> with <code>webspider_[tier]_coins</code> updates.
Godot 4.x	Use HTTPRequest targeting <code>https://firestore.googleapis.com/v1/projects/webspider-studios-hub/databases/(default)/documents/users/{uid}</code> .
Unreal Engine	Use FHttpModule to execute PATCH or commit transactions using the player's Firebase Auth JWT bearer token.
Flutter	Use <code>WalletService.instance.updateWebSpiderCurrency(userId, type, amount, reason)</code> .
